

ACKNOWLEDGMENT

We are grateful to the management of the “**CAUVERY INSTITUTE OF TECHNOLOGY**”, for providing us with the opportunity to carry out the project. We have great pleasure in expressing deep sense of gratitude to **Dr. Srikantappa A S** our principal for creating an excellent and technically sound environment in our Institution.

We are extremely grateful to **Prof. Rakshitha B H, Asst. Professor & HOD. Department of Computer Science and Engineering** for her valuable suggestions and for helping us in completing our Project.

We would like to express my profound sense of gratitude to our guide **Prof. Amulya K S Asst Professor Department of Computer Science and Engineering** for the Valuable Suggestions and for helping us in completing our Project.

We are extremely grateful to my project co-ordinator **Prof. Amulya K S Asst. Professor Department of Computer Science and Engineering** for his valuable suggestions and for helping us in completing our Project.

We thank all the teaching and non-teaching staff of Computer Science and Engineering department who has helped us on various occasions during the course of this work.

ABSTRACT

A smart home system integrates interconnected devices, sensors, and automation technologies to enhance comfort, security, and energy efficiency within residential environments. This project presents a centralized smart home architecture that enables real-time monitoring and intelligent control of household functions such as lighting, climate, appliances, and security systems. Using Internet of Things (IoT) technology, the system facilitates seamless communication between devices through a secure wireless network and allows users to manage their home remotely via a mobile or web application. Automation features—powered by rule-based logic and optional machine learning algorithms—adapt to user preferences and optimize resource consumption. The proposed smart home system demonstrates improved convenience, enhanced safety, and reduced energy usage, highlighting its potential as an effective solution for modern connected living.
